DETAILED ACTION

Election/Restrictions

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Support A: a support of a fiber film prepared by heat fusing a soft plastic resin on a composite fiber prepared by entangling a natural fiber on a soft plastic fiber.

Support B: a support of a fiber film prepared by heat fusing a plastic resin having a soft part and a hard part in common on a fiber consisting of a plastic having a soft part and a hard part in common.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner:

Claims 1-2, 4-6 relate to a cataplasm with support A

Claims 1, 3-5, 7 relate to a cataplasm with support B

Art Unit: 1615

Applicant is required to identify which grouping claim 8 relates to, in response to this election requirement.

The following claim(s) are generic: claims 1 and 4-5. These claims will be examined to the extent in which they are drawn to the elected species.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: the support system can be one of two components. Additionally, laminated adhesive layers on supports are well known in the art, such as seen in WO 94/02674. The species are independent and distinct support systems.
